

Labwork 3: CPU vs GPU Grayscale Conversion

Nguyen Phong Chau - 2540008

September 30, 2026

Code

```
blockSizeValues = [32, 64, 128, 256, 512]
img = plt.imread("cat.jpg")
pixelCount = img.shape[0] * img.shape[1]
img_flat = img.reshape(pixelCount, 3)

def grayscale_cpu(src, dst):
    for i in range(src.shape[0]):
        g = np.uint8((src[i, 0] + src[i, 1] + src[i, 2]) / 3)
        dst[i] = g

@cuda.jit
def grayscale_gpu(src, dst):
    tid = cuda.threadIdx.x + cuda.blockIdx.x * cuda.blockDim.x
    g = np.uint8((src[tid, 0] + src[tid, 1] + src[tid, 2]) / 3)
    dst[tid, 0] = dst[tid, 1] = dst[tid, 2] = g

devInput = cuda.to_device(img_flat)
devOutput = cuda.device_array((pixelCount, 3), dtype=np.uint8)
grayscale_gpu[gridSize, blockSize](devInput, devOutput)
hostOutput = devOutput.copy_to_host()
```

Block size 64 output

CPU

GPU

Mean time at block size 64 (9 runs): CPU 771.277 ms GPU 1.834 ms

Mean time by block sizes

Table 1: Average CPU and GPU processing times by block size

Block size	CPU (ms)	GPU (ms)
32	796.437	151.725
64	771.277	1.834
128	773.547	1.439
256	773.504	1.536
512	779.308	1.499

Figure 1: Mean time by block size and device.
